This readme file explains the detail of the data.

The data of two subtask are sentence_puzzle.npy and word_puzzle.npy, which shares same format as following:

```
{'id': 'SP-0_SR',
 'question': 'The six daughters of Mr. and Mrs. Mustard each have one brother. However, the family only consists of nine people; how is that possible?',
 'answer': 'Each daughter shares the same brother.',
 'distrator1': 'Some daughters get married and have their own family.',
 'distrator2': 'Some brothers were not loved by family and moved away.',
 'distrator(unsure)': 'None of above.',
 'label': 1,
 'choice_list': ['Some brothers were not loved by family and moved away.',
  'Each daughter shares the same brother.',
  'Some daughters get married and have their own family.',
  'None of above.'],
 'choice_order': [2, 0, 1, 3]}
```

id represents data type (SP for sentence puzzle, WP for word puzzle) and data index.

Question, answer represents the brain teaser question and its correct answer.

Distractor represents the incorrectly distractors for our QA problem.

Label represents the true answer index after randomizing the order.

Choice_list contains the choices of QA problem.

Choice_order represents the original question index after randomizing the order. (0 means answer, 1 means distractor 1, etc)
